

Banach / functional-analytic descriptors of arithmetic surfaces

($\circ$ = Bernoulli null mean $\pm 1\sigma$, $n = 30$ ensembles)

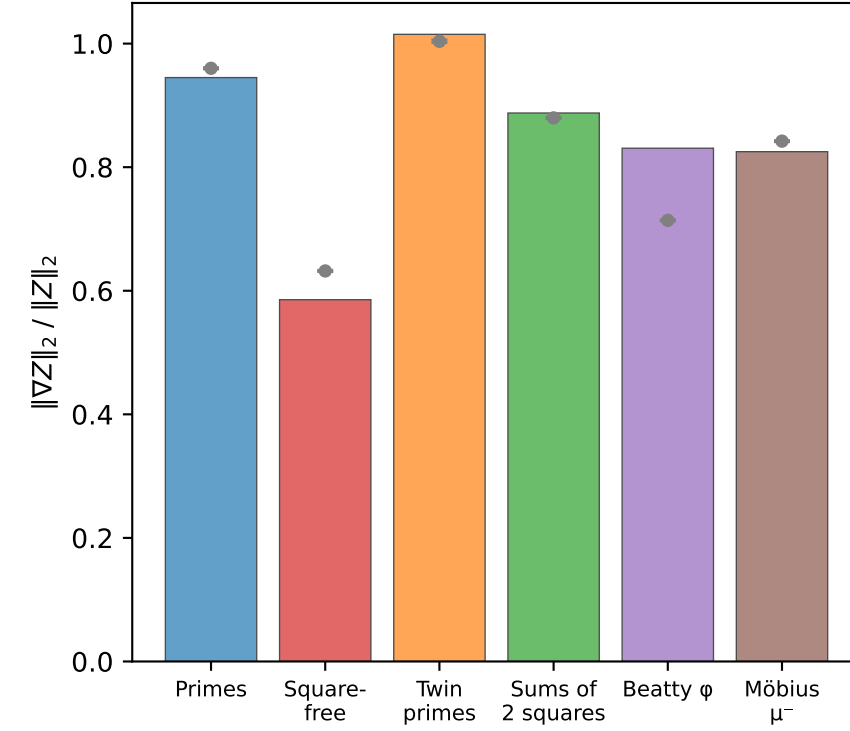

(a) Sobolev seminorm: arithmetic vs Bernoulli ($\circ$)

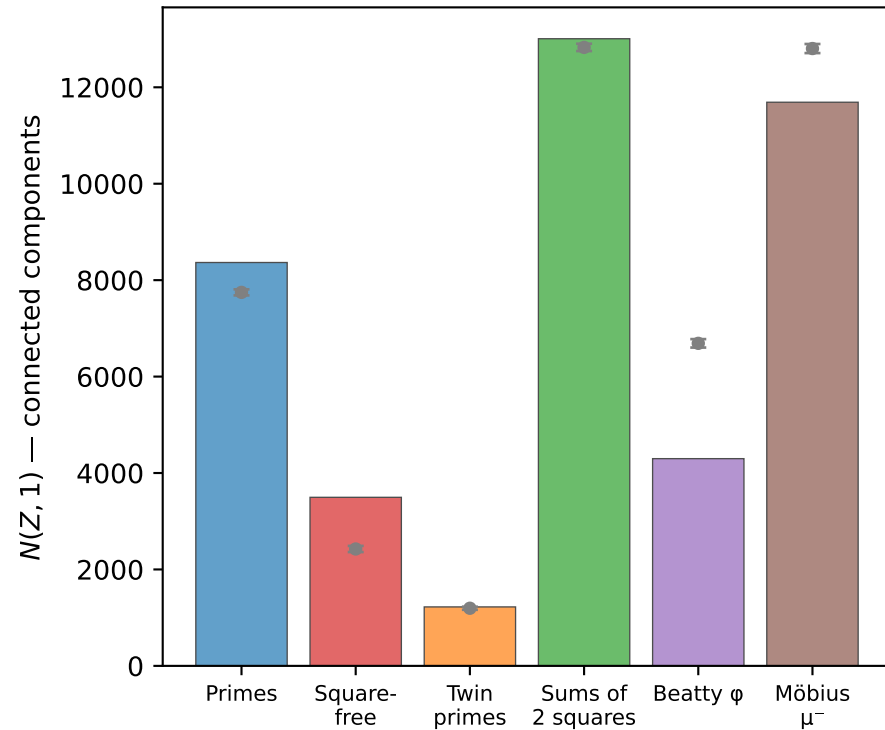

(b) Total variation (perimeter density)

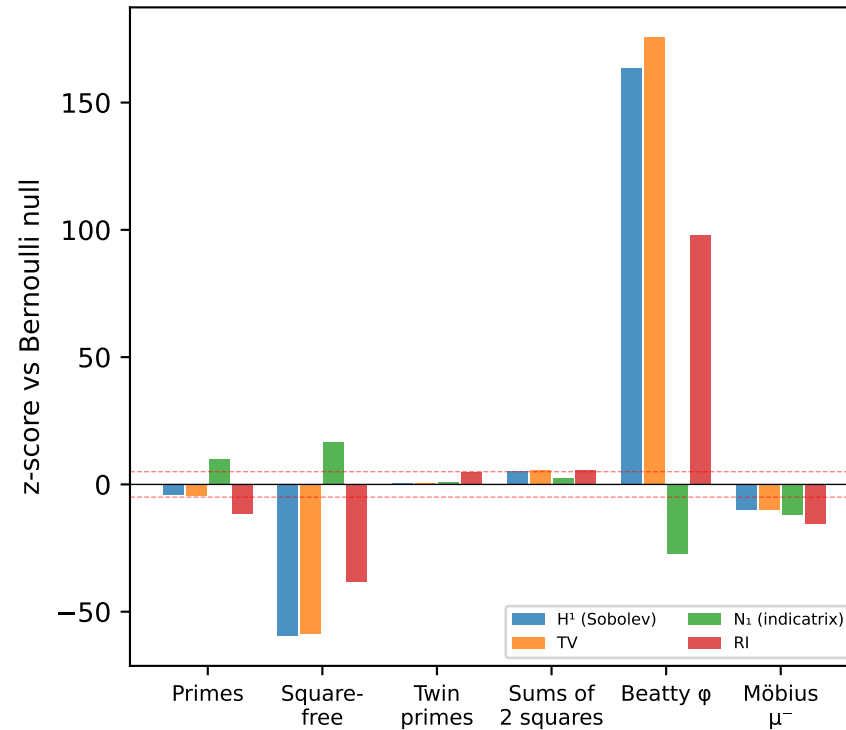

(c) Roughness index (scale-invariant)

(d) Banach indicatrix $N(Z, 1)$: islands of 1s

(e) Banach fingerprint: z-score summary

(f) Metrological vs Banach fingerprint
